

Workshop 1.1: Live Micro-Demo

Step 1

Paste the following text into a new ChatGPT chat box and execute:

Under Basel III, what is the exposure measure for a written credit default swap under the leverage ratio when used for client clearing, including the treatment of potential future exposure and cash variation margin?

Step 2

Find out what was wrong with the response, by next inputting this text and then executing.

Critically review your previous answer.

- 1. Identify any assumptions you made about regulatory treatment.**
- 2. Identify areas where Basel III rules are jurisdiction-specific.**
- 3. Highlight any statements that may require direct citation to regulatory text.**
- 4. Flag areas where your answer may be incomplete or simplified.**
- 5. State clearly whether any part of your answer could be inaccurate.**

Step 3

To 'constrain' ChatGPT's 'imagination', it can be worth inputting a much more directed request like this:

Under Basel III leverage ratio rules:

Explain the exposure measure for a written credit default swap cleared for a client.

Constraints:

- Maximum 150 words.**
- Use bullet points only.**
- Distinguish between replacement cost and potential future exposure.**
- Explain treatment of cash variation margin.**
- State clearly if jurisdictional differences may apply.**
- Do not speculate beyond Basel III text.**

If you are uncertain about any aspect, state "uncertain under Basel III framework".

Workshop 1.2: Live Micro-Demo

Step 1

A quick example of Generative AI in action and the beginnings of ‘prompt’ engineering.

Paste the following into a new ChatGPT chat box and execute.

<Role>

Senior banking regulator

<Objective>

Explain generative AI in 4 bullet points

<Constraints>

- Maximum 12 words per bullet**
- Distinguish from predictive AI**
- State one limitation clearly**

Workshop 2.2: Live Demo – 24/7 Client Chatbot Simulation

Step 1

Paste the following prompt text into a new ChatGPT input box before executing your information request:

You are a digital banking assistant responding to a retail investor.

The client asks:

"I saw markets dropped 2% today. Should I sell my investments now? I'm worried things are getting worse."

**Respond in clear, calm, non-technical language.
Do not provide personalised investment advice.
Provide general information only.
Encourage long-term thinking.
Keep response under 150 words.**

Workshop 2.3: Live Demo – Fraud Alert Explanation

Step 1 (if you can download and upload files)

Load the PDF document KatalaxySuspiciousLog.pdf into a ChatGPT input box and then paste in ALL of the following prompt text before executing your information request:

You are a financial crime analyst preparing an internal case summary.

Based on the following transaction data, draft a structured explanation suitable for review by a compliance manager.

Present:

- 1. Summary of activity**
- 2. Key risk indicators**
- 3. Why the alert triggered**
- 4. Recommended next step**

Maintain a neutral, factual tone.

Do not speculate beyond the data provided.

Step 1 (if you cannot download and upload files)

Copy the text out of KatalaxySuspiciousLog.pdf and paste into a ChatGPT input box. Do not execute just yet! Now paste in the full prompt text just above, into the same input box, and execute.

Workshop 2.4: Live Demo – Research in Action

Step 1 (if you can download and upload files)

Load the PDF document Katalaxy_Q2_2026_Earnings_Call_Transcript.pdf into a ChatGPT input box and then paste in ALL of the following prompt text before executing your information request:

You are a senior equity research analyst preparing material for a portfolio manager.

Please analyse the uploaded earnings call transcript and complete the following tasks:

- 1. Provide a structured executive summary in no more than 5 bullet points.**
- 2. Extract the key financial metrics mentioned, including:**
 - Revenue growth**
 - Operating margin movement**
 - Free cash flow**
 - Net debt position****Present these clearly and concisely.**
- 3. Identify forward-looking guidance and emerging risks discussed by management.**
- 4. Draft a 3-bullet client-ready briefing written in clear, non-technical language.**

Keep the tone professional and concise.

Do not invent information that is not explicitly stated in the transcript.

Step 1 (if you cannot download and upload files)

Copy the text out of Katalaxy_Q2_2026_Earnings_Call_Transcript.pdf and paste into a ChatGPT input box. Do not execute just yet! Now paste in the full prompt text just above, into the same input box, and execute.

Workshop 2.5: From Idea to ROI

Step 1

Paste the following question and prompt into a new ChatGPT chat:

<Role>

Head of digital banking strategy at mid-sized European bank

<Objective>

Design one practical generative AI product for retail or SME clients

<Constraints>

- Solve language-heavy problem
- Reduce staff time
- Include rough cost-benefit estimate
- Identify top 2 regulatory risks

<Output Format>

1. Product Concept
2. Current Manual Workflow
3. AI-Enabled Workflow
4. Estimated Time Saved
5. Regulatory Risks

Step 2

As follow up, paste the following question and prompt into next ChatGPT chat input box and execute:

Assume:

12,000 clients

Manual drafting time = 18 minutes

AI drafting + review = 4 minutes

Average staff cost = €65 per hour

Use Python code to calculate:

- Annual hours saved
- Approximate annual cost impact

Present results clearly.

Workshop 2.6: KYC Refresh — Plain vs Grounded

Step 1 – Paste the following into a new chat on ChatGPT

What events trigger a KYC refresh, and what evidence is required?

Step 2 (if you can download and upload files)

Load the PDF document KatalaxyBankKYCClientDueDiligence.pdf and then paste in ALL of the following prompt text:

Answer the following question using ONLY the uploaded Katalaxy Bank KYC Policy document.

Instructions:

Use only information explicitly contained in the document.

Do not rely on general knowledge.

For every trigger or evidence requirement listed, include a citation in square brackets using the section number (e.g., [4.2], [5.1]).

If the document does not specify something, write: "Not specified in supplied document."

Do not infer or assume beyond the text.

Structure output into two sections:

A. KYC Refresh Triggers

B. Required Evidence

Question:

What events trigger a KYC refresh, and what evidence is required?

Step 2 (if you cannot download and upload files)

Copy the text out of KatalaxyBankKYCClientDueDiligence.pdf and paste into a ChatGPT input box. Do not execute just yet! Now paste in the full prompt text just above, into the same input box, and execute.

Workshop 2.7:

Regulatory Circular – Action Checklist

Step 1 (if you can download and upload files)

Load the KatalaxyBankKYRegulatoryCircular.pdf file into a ChatGPT input box. Before executing, then paste this prompt into the ChatGPT input box and then execute:

<Role>

You are a senior compliance officer.

<Objective>

Extract operational requirements from the regulatory text below.

<Output Format>

- 1. Mandatory Actions**
- 2. Reporting Deadlines**
- 3. Documentation Required**
- 4. Escalation Requirements**

<Constraints>

Bullet points only.

Cite paragraph numbers.

Do not interpret beyond supplied text.

If requirement unclear, state "Unclear from text."

Step 1 (if you cannot upload and download files)

Copy and paste in all of the text in the KatalaxyBankKYRegulatoryCircular.pdf into a ChatGPT input box. Before executing, also paste in the full prompt above, and then execute.

Workshop 3.1: Summarisation Case – Prompt Structures

We downloaded the end of December 2023 JPMorgan Chase 10-K SEC filing from <https://www.sec.gov/Archives/edgar/data/19617/000001961724000225/jpm-20231231.htm> and then created the following ‘curated’ extract:

- JPMorganChase_10K_Curated_Extract.pdf (much shorter curated version)

Step 1 (if you can upload and download files)

Upload JPMorganChase_10K_Curated_Extract.pdf to ChatGPT with the following pasted-in structured prompt:

<Role>

You are a senior equity research analyst at a global investment bank.

<Audience>

You are writing for a portfolio manager with limited time.

<Objective>

Produce a concise but insightful summary of the annual report excerpt.

<Output Format>

- 1. Executive Summary (maximum 6 bullet points)**
- 2. Revenue and Profit Trends**
- 3. Balance Sheet and Liquidity Observations**
- 4. Key Risks Highlighted**
- 5. Strategic Priorities**
- 6. Red Flags or Areas Requiring Further Investigation**

<Constraints>

Maximum 500 words.

Bullet points only.

Focus only on material financial information.

Do not repeat boilerplate language.

Base your answer only on the supplied text.

Step 1 (if you cannot upload and download files)

Copy the text out of JPMorganChase_10K_Curated_Extract.pdf and paste into a ChatGPT input box. Do not execute just yet! Now paste in the full prompt just above, into the same input box, and execute.

Step 2

Let's shorten things. Paste this in and execute with ChatGPT:

Now tighten this to 250 words suitable for inclusion in a board pack.

Increase clarity.

Remove repetition.

Keep only the most material financial and risk points.

Step 3

Let's go for a bit more of an analytical angle. Paste this in and execute with ChatGPT:

Now identify three issues that could materially affect valuation over the next 12-24 months.

Explain each in one sentence.

Workshop 3.2: Client Portfolio Update — Faster Drafting

Step 1 (if you can upload and download files)

Upload Market_Summary_Portfolio_Update_Exercise.pdf into a ChatGPT input box, along with the following pasted-in structured prompt. Then execute:

<Role>

You are a senior wealth manager.

<Audience>

Retail client with moderate financial knowledge.

<Instructions>

Use Python to perform all calculations.

<Objective>

Draft a portfolio update covering market performance, portfolio impact, and outlook.

<Output Format>

- 1. Market Overview**
- 2. Portfolio Impact**
- 3. Risk Positioning**
- 4. Outlook**
- 5. Recommended Actions (if any)**

<Constraints>

Maximum 300 words.

Professional but accessible tone.

Avoid technical jargon.

Focus only on material movements.

Step 1 (if you cannot upload and download files)

Paste in all of the text from the Market_Summary_Portfolio_Update_Exercise.pdf file into a ChatGPT input box. Before executing, also paste in the full prompt above, and then execute.

Step 2

Let's change the audience. Paste this in as the next request:

Rewrite for institutional client.

Workshop 3.3: Excel VBA Macro – Automating Risk & Portfolio Reporting

Important Note

If you cannot download/upload files on your system or save Excel files as Macro-Enabled files, or Enable Macros when opening an Excel file, then please treat this workshop as a demonstration.

Step 1

If possible and allowable in your environment, download the Portfolio_Workshop_File.xlsx file to a system you are allowed to download into, where you are also allowed to save Excel files as Macro-Enabled files. This will be your starting work file.

Step 2

Open the Portfolio_Workshop_File.xlsx Excel file and save it as a Macro-Enabled Excel file with a different filename, such as Portfolio_Workshop_File_v02.xlsm. We will assume that name for the rest of this workshop.

Step 3

Ensure that you have ‘Developer’ enabled in your version of Excel. You will find a guide on how to do this in the appendix of this Workbook file.

Step 4

Go to a new ChatGPT chat session and upload the Portfolio_Workshop_File_v02.xlsm file into an input box.

Step 5

In the same input box, now input the following prompt text into ChatGPT and execute the prompt. Copy the code produced.

You are a senior Excel VBA developer.

Write production-quality VBA code that:

- Uses Option Explicit
- Avoids Type Mismatch errors
- Uses Variant when using Application.Match
- Checks IsError before assigning to numeric variables
- Uses the ActiveWorksheet (do not hard-code sheet names)
- Dynamically detects the header row (search first 5 rows)
- Accepts flexible header names:
- Price column may be: "Price", "Unit Price", or "PRICE"
- Quantity column may be: "Quantity", "Qty", or "QUANTITY"
- If headers are not found, prompt the user to select the Price and Quantity columns manually
- Prevent duplicate "Market Value" columns
- Include full structured error handling

The macro must:

- Loop through rows
- Calculate Price × Quantity
- Write to column "Market Value"
- Display total portfolio value
- Place total portfolio value two rows below the final market value calculated
- Place the phrase "Total Portfolio Value" in the cell one column to the left and right-align that label

The code must compile and run without Type Mismatch errors.

Keep the code clear and well-commented.

Step 6

Now open the Portfolio_Workshop_File_v02.xlsm and Enable Macros. From the enabled 'Developer' tab, go to the 'Visual Basic' coding environment and create a new VBA module by selecting Insert → Module.

Step 7

In the new module, paste your copied VBA code generated inside ChatGPT. Make a note of the main name of the function generated, then close the Visual Basic environment and go back to the main Excel worksheet.

Step 8

From the 'Developer' tab, choose the macro that you just pasted into the Visual Basic Module and execute that macro.

Workshop 3.4:

Validating AI-Generated VBA

Step 1 – We need to construct a long prompt inside a text editor

Using a text editor, create the prompt below, but with your new VBA inserted as appropriate, within triple backticks and the 'vba' marker. Between those markers, paste in the generated code copied from Visual Basic. Once you have created your full prompt inside a text editor, including the code, copy that full block text. (The backticks preserve good code formatting, which makes it easier for ChatGPT to examine code blocks.)

Paste your constructed prompt into a ChatGPT input box and then execute.

```
```vba  

>>> YOUR MACRO-GENERATED VBA CODE GETS PASTED HERE <<<

```  
Review the supplied VBA macro as if you were a senior risk or  
model validation reviewer. Identify hidden assumptions, edge-  
case failures, and production risks.  
  
Suggest improvements without changing the core functionality.
```

Step 2 (optional)

Once you receive a probably long response, maybe try this prompt to generate an improved code block:

```
As if you were a senior VBA developer, please rewrite the code  
with your recommendations added.
```

Workshop 3.5: Suspicious Activity Alert — Clear Internal Explanation

Step 1

Load the KatalaxyBankSuspiciousActivity.pdf file into a ChatGPT input box. Then paste this prompt into the same ChatGPT input box and execute:

<Role>

You are a financial crime analyst.

<Objective>

Draft a clear internal explanation of why this transaction pattern triggered a monitoring alert.

<Audience>

Internal compliance review committee.

<Output Format>

- 1. Summary of Activity**
- 2. Risk Indicators Identified**
- 3. Regulatory Considerations**
- 4. Recommended Next Steps**

<Constraints>

Maximum 250 words.

Professional tone.

Avoid speculation beyond supplied facts.

Highlight objective risk indicators.

Step 1 (If you cannot download and upload files)

Copy and paste in all of the text in the KatalaxyBankSuspiciousActivity.pdf into a ChatGPT input box. Before executing, also paste in the full prompt above, and then execute.

Workshop 3.6: Compliance Reminder

Email – Internal Use

Step 1

Paste this prompt into a ChatGPT input box and execute:

You are a compliance manager drafting an internal reminder email.

Context:

Recent monitoring has identified delays in updating customer KYC documentation. Several periodic reviews are overdue.

Draft a clear internal reminder email to relationship managers.

Requirements:

- Professional and firm tone
- No accusatory language
- Clear action required
- Reference internal policy obligations
- Keep under 200 words

Workshop 3.7: Live Demo – Red Teaming an AI Response

Step 1 – Generate a Confident Answer

Paste the following question and prompt into a new ChatGPT chat input box:

You are a senior portfolio strategist.

Explain how a 150 basis point increase in interest rates over 12 months would affect a balanced portfolio of 60% global equities and 40% investment-grade bonds.

Provide a structured and confident explanation.

Step 2 – Red Team It

Now paste in the text below and execute:

Critically review your previous answer.

- 1. Identify all assumptions you made.**
- 2. Highlight where your reasoning may be uncertain.**
- 3. Identify where additional data would be required.**
- 4. Flag any statements that may be overly confident.**
- 5. Explain what could go wrong if this analysis were used in a real client meeting.**

Workshop 3.8: Prompts Without RAG – Scenario Shock! What Happens Next?

Step 1

Paste the following question and prompt into a new ChatGPT chatbox:

What happens to my portfolio if inflation re-accelerates and rates rise 150 bps over 12 months?

<Role>

Senior multi-asset portfolio strategist

<Objective>

Describe how a 150bps rise in interest rates over 12 months could affect a diversified portfolio.

<Portfolio Composition>

60% global equities

30% investment-grade bonds

10% cash

<Output Format>

- 1. Equity Impact**
- 2. Fixed Income Impact**
- 3. Cash Impact**
- 4. Portfolio-Level Risk Implications**
- 5. Recommended Portfolio Considerations**

<Constraints>

Professional tone

Maximum 400 words

Focus on economic transmission mechanisms

Avoid vague language

Use Python code for all calculations

Workshop 3.9: Prompts With RAG – What Changes?

Step 1 (if you have a paid subscription with ChatGPT, you should be able to build your own RAG GPT)

Watch the demo of building a RAG, then build your own RAG using the KatalaxyBankHouseView.pdf file. Use the following instructions for your 'Instructions' panel:

<Role>

Senior multi-asset portfolio strategist

<Objective>

Describe how a 150bps rise in interest rates over 12 months could affect a diversified portfolio.

<Portfolio Composition>

60% global equities

30% investment-grade bonds

10% cash

<Output Format>

1. Equity Impact

2. Fixed Income Impact

3. Cash Impact

4. Portfolio-Level Risk Implications

5. Recommended Portfolio Considerations

<Constraints>

Professional tone

Maximum 400 words

Focus on economic transmission mechanisms

Avoid vague language

Use Python code to perform all calculation

Inside your new GPT RAG, now ask this question:

What happens to my portfolio if inflation re-accelerates and rates rise 150 bps over 12 months?

Step 1 (if you do not have a paid subscription with ChatGPT, but you can upload and download files)

Upload the KatalaxyBankHouseView.pdf file to a ChatGPT box and then paste in all of the following and then execute:

<Role>

Senior multi-asset portfolio strategist

<Objective>

Describe how a 150bps rise in interest rates over 12 months could affect a diversified portfolio.

<Portfolio Composition>

60% global equities
30% investment-grade bonds
10% cash

<Output Format>

1. Equity Impact
2. Fixed Income Impact
3. Cash Impact
4. Portfolio-Level Risk Implications
5. Recommended Portfolio Considerations

<Constraints>

Professional tone
Maximum 400 words
Focus on economic transmission mechanisms
Avoid vague language
Use Python code to perform all calculations

<Question>

What happens to my portfolio if inflation re-accelerates and rates rise 150 bps over 12 months?

Step 1 (if you do not have a paid subscription with ChatGPT, and you cannot upload or download files)

Copy and paste all of the text from the KatalaxyBankHouseView.pdf into a ChatGPT input box, then copy in the text below, then execute:

<Role>

Senior multi-asset portfolio strategist

<Objective>

Describe how a 150bps rise in interest rates over 12 months could affect a diversified portfolio.

<Portfolio Composition>

60% global equities
30% investment-grade bonds
10% cash

<Output Format>

1. Equity Impact

2. Fixed Income Impact
3. Cash Impact
4. Portfolio-Level Risk Implications
5. Recommended Portfolio Considerations

<Constraints>

Professional tone

Maximum 400 words

Focus on economic transmission mechanisms

Avoid vague language

Use Python code to perform all calculations

<Question>

What happens to my portfolio if inflation re-accelerates and rates rise 150 bps over 12 months?

Appendix

Enabling Developer Mode in Excel

This guide explains how to enable the **Developer tab** in Microsoft Excel on both **Windows PC** and **Mac**.

The Developer tab is required to:

- Open the VBA editor
- Insert macros
- Record macros
- Insert form controls

Part 1 – Windows PC

Step 1 – Open Excel

Open Microsoft Excel (any workbook is fine).

Step 2 – Open Excel Options

- Click **File**
- Click **Options** (bottom left)

Step 3 – Customize the Ribbon

- In the Excel Options window
- Click **Customize Ribbon**

Step 4 – Enable Developer

- In the right-hand panel (Main Tabs)
- Tick the checkbox labelled **Developer**

Step 5 – Confirm

- Click **OK**

You should now see **Developer** in the top ribbon.

Opening the VBA Editor (Windows)

Once Developer is enabled:

- Click **Developer**
- Click **Visual Basic**

Shortcut:

- Press **ALT + F11**

Part 2 – Mac (Excel for macOS)

Step 1 – Open Excel

Open Microsoft Excel.

Step 2 – Open Preferences

- Click **Excel** in the top menu bar
- Click **Settings** (or **Preferences**, depending on version)

Step 3 – Open Ribbon & Toolbar Settings

- Click **Ribbon & Toolbar**

Step 4 – Enable Developer

- In the right-hand panel under **Main Tabs**
- Tick the checkbox for **Developer**

Step 5 – Confirm

- Click **Save**

The Developer tab will now appear in the ribbon.

Opening the VBA Editor (Mac)

- Click **Developer**
- Click **Visual Basic**

Shortcut:

- Press **Fn + Option + F11**
(On some keyboards: **Option + F11**)

Common Issues

Developer tab not visible after ticking it?

Restart Excel.

VBA Editor won't open?

Ensure macros are enabled:

- Windows: File → Options → Trust Center → Trust Center Settings → Macro Settings
- Mac: Excel → Settings → Security & Privacy → Macro Security
